 \*\*United States Department of Labor division of OSHA does not recommend, approve, certify, or endorse individual trainers or training programs. It is OSHA's policy that the use of computer based training by itself is not sufficient to meet the intent of the HAZWOPER standards various training requirements...it is essential that the trainees have hands-on experience and excercises to provide an opportunity to become familiar with equipment and safe practices in a non-hazardous setting. The purpose of hands-on training is two-fold: first to ensure that the workers have an opportunity to learn by practical experience and second to assess whether workers have mastered the necessary skills. Also, it is critical that trainees have the opportunity to ask questions of a qualified instructor where material is unfamiliar to them.
